

Q1. How many Pillars of OOPs? Name them.

There are 4 pillars of OOPs
Given below -

1. Inheritance ✓
2. Encapsulation ✓
3. Polymorphism ✓
4. Data Abstraction ✓

Q2. What is Overriding and Overloading.

Overriding means - A child class provides its own implementation of a method that is already defined in the parent class. ✓

Overloading means - Allows a class to have multiple methods with the exact same name, but with different parameters. ✓

Q3. What is Encapsulation in OOPs?

Encapsulation means wrap a data and method together into single unit and categorizing direct access to data. ✓

#Q4. How many types of Inheritance? Name them.

There are 5 types of inheritance -

1. Single Inheritance
2. Multiple Inheritance
3. Multilevel Inheritance
4. Hierarchical Inheritance
5. Hybrid Inheritance

#Q5. How many types of Case? Name them and give one example of each?

There are 3 types of a case in Python -

1. PascalCase - class
2. camelCase - variable
3. snake_case - method

#Q6. What is class in OOPs and write some key points.

Class is blueprint or template used to create object.

Key Points -

1. Can contain variable and method
2. Naming Variable: PascalCase

#Q7. What is object in OOPs and some key points?

Object is an instance of any class.

Key Points -

1. Memory allocated if object is created
2. Can access variables and methods

Q8. How many types of Variables in OOPs?

There are 2 types of variables in OOPs.

Q17. What is mode "w" and mode "a" in writing files?

In writing files 'w' mode means writing files and 'a' mode means append files.

#Q19. What is lambda function ()? And methods of lambda () name?

A lambda function is an unnamed small function.

Q22. Given a list of words extract words that contain the letter 'e'

Words = ["tree", "book", "python", "sky"]

```
Words = ["tree", "book", "python", "sky"]  
[ch for ch in words if 'e' in ch]
```

#Q18. What is difference between "w" and "x" mode in writing files?

"w" mode -

1. opens a file for writing only
2. if the file not exist, a new file is created.

"x" mode -

1. open a file for creation
2. if the file not exist, a new file is created.

Q16. Write a program to read CSV file using Python?

fileName = r"C:\Users\Ajit Mohire\Desktop\Data.txt"

file = open(fileName, 'r')

reader = csv.reader(file)

print(reader)

Q21. Extract all vowels from the string using list comprehension: text
"Comprehension"?

text = "Comprehension"

[ch for ch in text if ch in "aeiouAEIOU"]
