

#Q1. Write a Function to classify a person's age group: Child, Teen, Adult, senior

```
def classify(age):  
    if age >=0 and age <=13:  
        return "you are a child"  
    elif age >=14 and age <=19:  
        return "you are a teen"  
    elif age >=20 and age <=59:  
        return "you are a adult"  
    elif age >=60 and age<=200:  
        return "you are a sinier"  
    else:
```

classify(13)

output:

'you are a child'

#Q3. Write a function to check if a number is within a given range (1-100).

```
def range(number):  
    if number >= 1 and number <= 100:  
        return True  
    else:  
        return False  
range(0)
```

output:
False

#Q6. Write a function to print all numbers divisible by 7 but not by 5 from 1-100.

```
def divide7not5():  
    for num in range(1, 101):  
        if num % 7 == 0 and num % 5 != 0:  
            print(num)  
divide7not5()
```

output:

7
14
21
28
42
49
56
63
77
84
91
98

output

#Q7. Print a pattern star like this:

#*
#**
#*
#**

for i in range(1, 3):
 print('*' * i)

for i in range(2, 0, -1):
 print('*' * i)

1, 3
1, 3

output:

*
**
**
*

#Q8. print a pattern like this:

*

*

for i in range(3, 0, -1):

print('*' * i)

for i in range(2, 0, -1):

print('*' * i)

output:

**

*

**

*

#Q10. Create a function to count the number of vowels and consonants in a string.
#String = "The quick brown fox jumps over the lazy dog"

```
string = "The quick brown fox jumps over the lazy dog"
```

```
def vc_count(string):
```

```
    vowels = "aeiouAEIOU"
```

```
    vowelcount = 0
```

```
    consonantcount = 0
```

```
    for char in string:
```

```
        if char.isalpha():
```

```
            if char in vowels:
```

```
                vowelcount += 1
```

```
            else:
```

```
                consonantcount += 1
```

```
    return vowelcount, consonantcount
```

```
vowels, consonants = vc_count(string)
```

```
print("Numbers of vowel:", vowels)
```

```
print("Numbers of consonant:", consonants)
```

output:

Numbers of vowel: 11 ✓

Numbers of consonant: 24 ✓

#Q18. Create a class "Rectangle" with

#> length ✓

#> width ✓

```
class rectangle:
```

```
    def __init__(self, length, width):
```

```
        self.length = length
```

```
        self.width = width
```

```
rect = rectangle(5,10)
```

```
print("length:", rect.length) ✓
```

```
print("width:", rect.width) ✓
```

length: 5

width: 10
