

Maria Assessment-1

Assignment no.1

#Qno3] Write a function to check if no is within range 1 to 100

Ans----

```
num = int(input("Enter any value"))
if num>0 and num<=100:
    print("The number is in the range 1 to 100")
else:
    print("The no. is not in the range 1 to 100")
```

#Qno1] Write a function to classify persons age group child teen adult senior

Ans --

```
age = int(input("Enter your age"))
if age>5 and age<15:
    print("You are a child")
elif age>=15 and age<=30:
    print("You are a teen")
elif age>30 and age <=50:
    print("You are an adult")
elif age> 50 and age<=80:
    print("You are a senior citizen")
else:
    print("You are old")
```

#Qno16 Write a program to open and read file named data.txt, Requirements -> display file content, if file not exist print file not found error

Ans--

try:

```
filePath = "C:\\Users\\DELL\\Desktop\\python.txt"
file = open(filePath, "r")
data = file.read()
```

except FileNotFoundError:

```
    print("No such a file")
```

else:

```
    print(data)
```

#Qno14 Write a function to display cube of numbers from 1 to 50 in a list

Ans--

list1 =

[1,2,3,4,5,6,7,8,9,10,11,12,13,14,15,16,17,18,19,20,21,22,23,24,25,26,27,28,29,30,31,32,33,34,35,36,37,38,39,40,41,42,43,44,45,46,47,48,49,50]

for i in list1:

print(i**3)

range(1,51)

3

Qno4 Write a function to find the sum of numbers from 1 to n.

Ans-

n= 11

total = 0

for i in range(1,n):

total+=i

print("The sum of numbers from 1 to n is:",total)

Loop function

total = total + i

#Qno6 Write a function to print all the numbers divisible by 7 and not divisible by 5 from 1 to 100

Ans--

for i in range(1,101):

if i%7==0 and i%5!=0:

print(i)

3

#Qno12 Define a function to count no of words in a list

Ans --

words=["Tranquil","Meadow","Illuminate","Whisper","Serene","Cascade","Ember","Twilight","Glimmer","Solitude","Horizon","Wander","Luminous","Echo","Drift","Radiant","Murmur","Velvet","Breeze","Ethereal"]

count = 0

for i in words:

count+=1

print("Total length of words is",count)

Nested loop?

Qno19 What is polymorphism ?

Ans-

Polymorphism means a child class redefines a method that already exist in the parent class.

class Animal:

def sound(self):

print("Animal makes sound")

class dog (Animal):

def sound(self):

print("bark")

class cat (Animal):

def sound(self):

print("Meao")

d = dog()

d.sound()

c = cat()

c.sound()

Handwritten notes in red:
- "fart" with a squiggly line above it.
- "bark" with an arrow pointing to the dog class.
- "Meow" with an arrow pointing to the cat class.
- A circled "5" with an arrow pointing to it from the "Meow" note.
